

1. Human Maximus Pro Max Global Button Design Specification

Design name

Black Diamond Royal Interface System

The button language should feel:

- luxurious;
- high-tech;
- dimensional;
- tactile;
- magnetic;
- unmistakably Human Maximus.

Every important button should look like a physical object rising from the interface—not flat text inside a colored rectangle.

Core visual formula

Every premium button should include six layers:

1. **Deep base surface**
Black glass, royal purple glass or diamond white.
2. **Metallic outer frame**
Platinum or controlled gold-platinum edging.
3. **Inner illuminated rim**
Purple or white energy line inside the border.
4. **Raised face**
A bevel or soft vertical gradient that creates physical depth.
5. **Directional highlight**
A brighter reflection near the top edge.
6. **Floating shadow and aura**
A dark drop shadow beneath the button plus a restrained purple glow.

The result should make the user instinctively feel:

“That is a button. I want to press it.”

Official button hierarchy

A. Royal Purple Primary Command

Use for the strongest action on a screen.

Examples

- Play Now
- Resume
- Begin Journey
- Send My Request
- Continue
- Enter Pro Max

Surface

- Top: bright electric amethyst
- Center: royal saturated purple
- Bottom: deep violet
- White text
- Bright platinum edge
- Purple outer aura

Behavior

- Largest or most luminous control
- Strongest depth
- Most pronounced hover lift
- Must never compete with another purple primary command in the same area

Ideal mobile use

The Play button should be the dominant purple jewel.

B. Black Diamond Primary

Use for strong actions that should feel premium but slightly quieter than Play.

Examples

- Install App
- Explore
- Share
- Request a Topic
- Open Full Player
- Menu

Surface

- Glossy obsidian-black body
- White text
- Platinum-white border
- Subtle purple inner glow
- Controlled purple or white aura
- Optional tiny gold-platinum corner accents

Purpose

This is the most versatile premium button family.

C. Diamond White Conversion Command

Use for purchase, membership or access actions.

Examples

- Unlock Max Level
- Start Free Trial
- Join Now
- Upgrade
- Log In

Surface

- Diamond-white or soft silver face
- Black text

- Purple icon
- Dark black inner outline
- Purple outer glow
- Very restrained warm-gold highlight only when communicating premium value

Purpose

White separates the financial action from the darker interface and makes the conversion button unmistakable.

D. Black Utility Control

Use for secondary controls and compact round actions.

Examples

- Previous
- Next
- Rewind
- Forward
- Repeat
- Shuffle
- Volume
- Favourite
- Add to Playlist
- Close

Surface

- Black glass
- Platinum circular edge
- Purple icon or white icon
- Small inner glow
- Light dimensional bevel

Rule

These controls should belong to the same royal family without competing with Play.

E. White Utility Control

Use sparingly when contrast is needed.

Examples

- Confirm
- View Details
- Already a Member
- Secondary conversion option

Surface

- White face
 - Black text/icon
 - Purple outline
 - Purple drop glow
-

Shape standards

Major action buttons

- Fully rounded capsule or luxury rounded rectangle
- Border radius: approximately 18–24 px
- Height:
 - Desktop: 48–58 px
 - Mobile: 52–64 px
- Clear icon-and-label separation
- Comfortable internal padding

Main Play button

- Perfect circle
- Larger than every neighboring control
- Layered double or triple rim
- Bright purple center
- Strong white play symbol
- Small royal jewel points or light accents around the outer ring
- Visible depth beneath the button

Compact controls

- Perfect circle
 - Minimum mobile touch area: 44–48 px
 - Icon centered precisely
 - Consistent diameter across the control family
-

Icon rules

Icons should be:

- simple;
- bold;
- immediately understandable;
- white, black or purple depending on the surface;
- large enough to read without squinting.

Do not mix several incompatible icon styles.

Use one consistent family:

- rounded line icons for secondary actions;
 - solid white Play triangle;
 - royal crown for Max Level;
 - download tray for Install;
 - connected-node share icon for Share;
 - speech/lightbulb icon for Request Topic;
 - plus sign for Add or New Playlist.
-

Typography

Button labels

Use a clean, strong sans-serif.

Recommended treatment:

- Bold or semibold
- Clear spacing
- All caps for major commands when appropriate
- No tiny thin text
- No excessive letter spacing
- Maximum two or three words whenever possible

Examples:

- INSTALL APP
 - PLAY NOW
 - MAX LEVEL
 - REQUEST TOPIC
 - START FREE TRIAL
 - SHARE
-

State system

Every button needs five states.

Default

Raised, polished and clearly clickable.

Hover

- Lift 2–3 px
- Glow increases slightly
- Top reflection becomes brighter
- Border sharpens

Pressed

- Moves inward 1–2 px
- Shadow shortens
- Glow reduces slightly
- Surface darkens modestly

It should feel physically pressed.

Active

Examples:

- Playing
- Favourite selected
- Repeat enabled
- Menu open

Active state must use more than color alone:

- brighter border;
- icon change;
- filled icon;
- active indicator;
- stronger inner glow.

Disabled

- Reduced contrast
- No glow
- No hover lift
- Cursor and appearance clearly indicate inactivity

Button families by action

Action	Official style
Play / Resume	Royal Purple Primary
Install App	Black Diamond Primary
Unlock Max Level	Diamond White Conversion
Start Free Trial	Diamond White Conversion
Explore / Menu	Black Diamond Primary
Request Topic	Black Diamond Primary or Purple Secondary
Share	Black Diamond Primary

Add Playlist	Black Utility or Purple Secondary
Previous / Next	Black Utility
Repeat / Shuffle	Black Utility
Favourite	Black Utility with filled purple active state
Close	Black Utility, minimal glow
Confirm	Purple Primary
Cancel	Quiet black or white tertiary

Desktop command hierarchy

The visual strength should be:

1. Play
2. Unlock Max Level / Start Free Trial
3. Install App
4. Explore / Search
5. Request Topic / Share / Playlist
6. Utility controls

Only one control should look like the undeniable primary action in each area.

Mobile command hierarchy

The first mobile screen should immediately present:

1. **Install App** — black jewel
2. **Play** — large purple jewel
3. **Max Level** — white jewel
4. **Menu** — black jewel

This black–purple–white–black rhythm is balanced, clear and premium.

Glow discipline

Purple glow should enhance shape, not blur it.

Use:

- tight glow at the edge;
- softer secondary aura;
- brighter focal sparkle at selected corners;
- no excessive neon haze.

Gold should remain a rare luxury reflection—not a dominant border color across the player.

Spacing rules

Buttons should never feel crowded.

- 8–12 px between compact controls
 - 10–16 px between major mobile buttons
 - Equal height across buttons in the same row
 - Consistent visual weight
 - No icons touching borders
 - No wrapped labels inside primary actions
-

Accessibility requirements

Premium design must remain easy to use.

- Strong text contrast
 - Minimum 44–48 px touch targets
 - Visible keyboard focus ring
 - Icons accompanied by tooltips or labels
 - Reduced-motion support
 - Active states not communicated only through purple color
 - Clear disabled states
-

Locked design rule

This becomes the permanent Human Maximus standard:

No important action may use a generic flat browser-style button.

Every future major action must use one of the defined Black Diamond Royal families.

2. Final AAA Pro Max Player Polish and Launch Checklist

This is the checklist I would use before cutting the ribbon.

A. First-impression experience

- Human Maximus identity is clear within three seconds.
- The hero looks premium on desktop and mobile.
- Shawn and Naya are both visible.
- No face is unintentionally cropped.
- The viewer understands that this is an audio and wisdom player.
- Install, Play and Max Level are immediately obvious.
- No unnecessary text competes with the hero.
- The design feels consistent from top to bottom.

Pass condition

A first-time visitor knows what to press without explanation.

B. Global button system

- Royal Black Diamond styles applied throughout.
- Main Play is always the strongest button.
- Install App is prominent.
- Max Level is high contrast.

- Request Topic and Share look important but secondary.
- Every control has hover, pressed, active and disabled states.
- No leftover flat or generic buttons.
- Mobile and desktop use the same design language.

Pass condition

Every clickable control looks intentional and tactile.

C. Desktop layout

- Top navigation is aligned and readable.
- Explore menu opens cleanly.
- Black, white and purple menu panels have proper contrast.
- Hero does not collide with search or navigation.
- Up Next is readable without blocking important artwork.
- Right sidebar content is visible and scrollable.
- Saved Playlists can be opened and managed.
- Bottom player remains fully inside the viewport.
- Share and volume do not overlap.
- No controls disappear below the fold.

Pass condition

No desktop viewport from roughly 1024 to 1920 px has overlap or clipping.

D. Mobile layout

- Install App is visible near the top.
- Play is centered and unmistakable.
- Max Level is visible without scrolling excessively.
- Menu opens the complete navigation.
- Search does not overlap the hero.
- Shawn and Naya remain visible.
- Episode title remains readable.
- Transport controls stay together cleanly.
- No horizontal page overflow.

- Bottom player does not cover content.
- Buttons are thumb-friendly.
- The interface feels like a real mobile app, not compressed desktop software.

Pass condition

Test successfully at approximately:

- 320 px
 - 360 px
 - 375 px
 - 390 px
 - 412 px
 - 430 px
-

E. Audio engine

Test every action:

- Play
- Pause
- Resume
- Previous
- Next
- Back 10
- Forward 10
- Seek
- Volume
- Mute
- Speed
- Repeat one
- Repeat all
- Shuffle
- Sleep timer

Also confirm:

- playlist controls use the same audio engine;
- hero and bottom controls stay synchronized;
- Media Session lock-screen controls work;
- progress continues updating;
- next track begins correctly;

- failed audio displays a useful error.

Pass condition

There is exactly one synchronized audio engine controlling the experience.

F. Search and recommendations

Test searches such as:

- love
- relationships
- confidence
- sleep
- fear
- purpose
- clarity
- 528 Hz
- nervous system

Confirm:

- Enter submits search.
- Results are relevant.
- Empty results provide guidance.
- Voice search works where supported.
- A clear fallback appears when voice dictation is unavailable.
- Search results display correct images and descriptions.

Pass condition

The search behaves like a useful guide, not a decorative input box.

G. Playlists, queue and favourites

- Create playlist
- Name playlist
- Open playlist

- View all experiences
- Play playlist
- Pause playlist
- Resume playlist
- Remove an experience
- Delete playlist
- Add from hero
- Add from library cards
- Add to Up Next
- Remove from Up Next
- Favourite and unfavourite
- Verify persistence after refresh

Pass condition

Users can understand exactly what is saved and what will play next.

H. Install App

Test:

- Install button opens native prompt where available.
- Windows Chrome guide plays.
- Windows Edge guide plays.
- Android guide plays.
- iPhone guide plays.
- Written instructions match the videos.
- Installed icon appears correctly.
- Installed app opens at the correct page.
- Manifest name and icon are correct.
- Service worker does not trap visitors on an outdated version.
- Progress and playlists remain available after installation.

Pass condition

A nontechnical user can install it without needing personal help.

I. Request a Topic

- Formsfree endpoint is connected.
- Topic field is required.
- Optional fields work.
- Current experience is included.
- Submission remains inside the player.
- Clear success message appears.
- Email notification reaches you.
- Submission appears inside Formsfree.
- Spam protection and basic validation work.
- Failed requests display a friendly retry message.

Pass condition

A real topic request reaches both your inbox and the Formsfree submission log.

J. Share system

Test:

- Native device share
- Facebook
- WhatsApp
- SMS
- Email
- X
- LinkedIn
- Copy Link

Confirm:

- episode-specific link is shared;
- title is correct;
- message sounds human;
- popup closes correctly;
- no controls overlap.

Pass condition

A person can share an individual experience in two taps.

K. Content and artwork

For every live experience:

- correct audio file;
- public permissions;
- correct title;
- correct type;
- correct episode/Codex/frequency identity;
- correct cover;
- correct nutshell description;
- correct host identification;
- no accidental duplicate;
- correct sequence.

Check the complete library automatically and visually.

Pass condition

Zero known broken audio links or incorrect covers.

L. Four-part welcome journey

Confirm the official order:

1. There's More Than Meets the Eye
2. Take Your Power Back
3. Inside Human Maximus
4. Welcome to the Next Level

Each should include:

- matching artwork;
- description;
- synced frequency music;
- Play;
- Favourite;
- Playlist;
- Share;
- automatic next episode.

Pass condition

A new person can complete the full welcome journey without getting lost.

M. Demo and full editions

Demo edition

- Four welcome experiences unlocked.
- Chosen samples unlocked.
- Premium library remains visible.
- Locked items do not play.
- Locked action opens the free-trial window.
- Start Free Trial link is correct.
- Already a Member opens the correct route.

Full edition

- Complete library plays.
- No unnecessary lock icons.
- No repeated free-trial prompts.
- Correct app name and manifest.
- Groove course points to the full-player page.

Pass condition

The difference between Preview and Max Level is clear and intentional.

N. Groove purchase journey

Run one complete test transaction:

1. Click Start Free Trial.
2. Complete checkout.
3. Receive membership access.
4. Log in.

5. See the Pro Max Player course.
6. Click Enter Now.
7. Reach the full player.
8. Play a premium experience.
9. Test a refund/cancel scenario when practical.

Pass condition

The customer receives access without manual intervention.

O. Analytics

Track at minimum:

- page load;
- Play pressed;
- 25%, 50%, 75%, complete;
- Install clicked;
- Install successful when detectable;
- Search performed;
- empty search;
- smart mode clicked;
- Favourite;
- playlist created;
- Share;
- Request Topic submitted;
- Unlock Max Level clicked;
- checkout opened.

Pass condition

You can answer what people use, love and abandon.

P. Social and navigation hub

Confirm all links:

- Home

- Free Gifts
- The Keys
- The Code
- Media
- My Story
- Share
- Ambassador/Get Paid
- Contact
- Login
- Courses
- Walkthroughs
- TikTok
- Instagram
- Facebook Group
- Facebook Page

Missing or unconfirmed links should not appear.

Pass condition

Every displayed link opens the intended destination.

Q. Accessibility and trust

- Keyboard navigation works.
- Focus states are visible.
- Images have alt text where appropriate.
- Text is readable.
- Reduced-motion mode works.
- No false ratings or fake engagement totals.
- AI Shawn and AI Naya are clearly disclosed.
- Frequency language remains responsible.
- Error messages are understandable.

Pass condition

The premium experience remains honest, readable and usable.

R. Performance

- Initial page loads quickly.
- Images are optimized and lazy-loaded where possible.
- YouTube embeds load only when opened.
- Large audio files are not preloaded unnecessarily.
- Search does not freeze the interface.
- Service worker updates correctly.
- No repeated console errors.
- No memory leak after several tracks.

Pass condition

The product remains responsive during a long listening session.

S. Final device certification

Test on:

- Windows Chrome
- Windows Edge
- Android Chrome
- Installed Android app
- iPhone Safari
- Installed iPhone web app
- Mac Chrome or Safari when available

Pass condition

No major feature is untested on a target platform.

Final ribbon-cutting standard

I would declare the Human Maximus Pro Max Player ready when:

- every visible button works;
- no mobile or desktop overlap remains;

- Request Topic sends successfully;
- sharing works;
- installation works;
- the four welcome audios are connected;
- the demo locks correctly;
- the full version is accessible through Groove;
- the test purchase succeeds;
- analytics are collecting;
- the Black Diamond Royal button system is consistent everywhere.

At that point, it is no longer merely a beautiful player.
